Professional Summary

DevOps and Linux Systems Engineer with 9+ years deploying and managing production infrastructure. Experienced in Docker, CI/CD, Nginx, PostgreSQL, and self-hosted environments. Strong fullstack background (Next.js, TypeScript, React) enables close collaboration with application teams. Google Cybersecurity certified, CompTIA Security+ in progress. Currently expanding expertise in Kubernetes and infrastructure-as-code (Terraform).

Work Experience

DevOps & Fullstack Engineer / Technical Founder

Self-Employed | July 2021 – Present | Remote

- Built and operate self-hosted production platform (DeFi Content Platform) on Ubuntu VPS: Docker Compose stack (Next.js, PayloadCMS, PostgreSQL, Nginx), CI/CD via GitHub Actions, Let's Encrypt SSL/TLS
- Provisioned VPS from scratch: user/SSH hardening, ufw firewall, DNS configuration, automated backups, monitoring scripts
- Developed fullstack application using Next.js 15, TypeScript, PostgreSQL with normalized schema for 3,000+ platform entries across DeFi/crypto focused taxonomies
- Automated data collection with Playwright scraping pipelines to bootstrap seed data (platforms, chains, categories)
- Optimized performance across stack: Next.js asset optimization, database indexing, Nginx caching/compression, analytics integration

Tech: Linux (Ubuntu), Docker, Nginx, PostgreSQL, Next.js, TypeScript, PayloadCMS, GitHub Actions, Bash, Playwright

Fullstack Developer (Cloud & Web)

POWERSHIFTER Digital | September 2018 – June 2021 | Vancouver, BC

- Developed serverless IoT applications on GCP using Cloud Functions, Firestore, and Pub/Sub for real-time data ingestion and transformation
- Collaborated with Agile team (designers, PMs, senior

engineers) to build and deploy UIs integrated with Contentful CMS and cloud backends

- Contributed to GitLab CI/CD pipelines for staging/production deployments and built WordPress client sites as needed

Tech: GCP (Cloud Functions, Firestore), Node.js, TypeScript, React, WordPress, GitLab, Contentful, Jira

Fullstack Web Developer (Contract)

Goat Social | July 2019 – September 2019 | Vancouver, BC

- Delivered CraftCMS and WordPress websites for education clients with custom templates and CMS integrations
- Coordinated with client IT on hosting, DNS, and deployment to OpenShift environments

Tech: CraftCMS, WordPress, GitLab, OpenShift, Bootstrap

Fullstack Developer / Linux Web Hosting

Major Tom | November 2015 – August 2019 | Vancouver, BC

- Deployed and maintained 30+ WordPress sites on Linux hosting (CentOS/Ubuntu) with 99.9% uptime through Apache/Nginx tuning, SSL/TLS, caching, and security hardening
- Performed daily sysadmin work: SSH configuration, firewall rules, cron jobs, MySQL backups, log analysis, stack troubleshooting
- Collaborated with designers and PMs to deliver marketing sites for SMB and enterprise clients

Tech: Linux (CentOS/Ubuntu), Apache, Nginx, MySQL, WordPress, Bash, AWS EC2, Bitbucket

Skills

DevOps & Infrastructure:

Linux (Ubuntu, CentOS) - Docker & Docker Compose -
Nginx/Apache - CI/CD (GitHub Actions, GitLab) -
PostgreSQL/MySQL - VPS provisioning - SSH/firewall hardening -
Backup/recovery

Scripting & Automation:

Bash - Node.js - Playwright web scraping

Application Stack:

Next.js - React - TypeScript - PayloadCMS - WordPress - REST APIs

Security:

Google Cybersecurity certified - CompTIA Security+ (in progress) -
Server hardening - SSL/TLS - Incident response

Certifications

Google Cybersecurity Certificate – Google (October 2024)

CompTIA Security+ – CompTIA (In Progress)

Education

Solana Turbin3 – Solana Developer Cohort | Q1 2023 | Remote

Rust fundamentals and Solana program development using native Solana and Anchor frameworks

Lighthouse Labs – Fullstack Web Development | May – August 2015
| Vancouver, BC

Ruby on Rails, JavaScript, Node.js, SQL bootcamp - People's Choice
Award winner - Midterm project viral on Reddit
